VICARD GENERATION 7

CHANGING the PARADIGM

BARRELS SORTED
BY TANNIN POTENTIAL

Vicard Generation 7 was born from a desire to control the factors that cause variability in cooperage, and bring greater precision to wine and spirit maturation.

With six generations of expertise, Jean-Charles Vicard launched the seventh update of an intensive R&D program started in 2008. Vicard Generation 7 utilizes NIRS (Near-Infrared Spectroscopy) technology to select staves based on their tannin potential. This perfectly uniform raw material selection, along with molecular toasting, has enabled Vicard Generation 7 to offer very precise, uniform and reproducible products.

THREE CLASSES OF TANNIN POTENTIAL

The analysis of 2500 staves enabled us to isolate and define the causes of one important variable: the ellagitannin content in the oak.

-  **ORIGINE /**
2,000 to 4,000 $\mu\text{g EGT/g}$ of oak
-  **SYMÉTRIE /**
4,000 to 6,000 $\mu\text{g EGT/g}$ of oak
-  **ÉNERGIE /**
6,000 to 8,000 $\mu\text{g EGT/g}$ of oak

A SPECIFIC METHODOLOGY

MOLECULAR TOASTING

Involves applying a controlled, regular and uniform heat to the barrel's inner surface, using a double-cone furnace, which matches the shape of the barrel. The outer chamber eliminates the variations due to external interferences such as humidity and ambient temperature. **This computerized system ensures perfect control of the toasting temperature throughout the entire toast cycle.**

TANNIN POTENTIAL

The ellagitannin content is measured after machining and before assembly, using near-infrared spectroscopy. Each stave is analyzed and sorted by tannin level and barrels are then cooper by tannin level yielding homogeneous barrels with characterized and reproducible tannin potential.

ANOTHER APPROACH TO BARREL-MAKING

HOMOGENEITY / REPRODUCIBILITY / PRECISION

ONE STEP CLOSER TO PRECISION

Although the molecular toasting process made significant advancement in the precision of our products, we realized we had not fully mastered the variation of raw material. The research into this variation, initiated in 2008, was focused on the classification of staves based on their ellagitannin content. This breakthrough allowed us to reach our goal and launch the Vicard Generation 7 range.

SENSORIAL IMPACT

Our methodology enables us to consistently produce barrels with perfectly uniform tannin contents (ellagitannin levels) which respect the vintage's typicity.

AVAILABLE PROFILES

ORIGINE / PTB - TERROIR

Low Tannin Potential Selection. **ORIGINE** (LTP) adds minimal tannins while offering all the benefits and complexities of oak aging. Characterized by fruity, bright notes with a focused palate.

AROMATIC NOTES :

VARIETAL TYPICITY

FRESH FRUIT

FRESHNESS

MINERAL

SYMÉTRIE / PTM - EQUILIBRIUM

Medium Tannin Potential Selection. **SYMÉTRIE** (MTP) offers an intermediate profile, combining structure and tension while respecting the fruit.

AROMATIC NOTES :

VANILLA

RIPPED FRUIT

CARAMEL

COCOA

ÉNERGIE / PTH - STRUCTURE

High Tannin Potential Selection. **ÉNERGIE** (HTP) brings an element of strength, adding structure and roundness, as well as subtle smoky notes.

AROMATIC NOTES :

COCOA

ROASTED COFFEE

TOASTED BREAD

VANILLA BREAD

TECHNICAL CHARACTERISTICS

Capacities : 225, 228, 300, 350, 400, 500 L
 Origin : French oak and border forests
 Raw material sorted by tannin potential (TP)
 Computer controlled molecular toasting, using radiant heat

AWARDS

I+Q AWARDS 2016
 Innovation of the year

SITEVI 2017
 Bronze medal

CHANGING *the* PARADIGM

.....

GROUPE
VICARD

.....

Driven by the passion of his work and born from five generations of expertise, Jean-Charles Vicard and his team are crafting, quality barrels, casks and tanks using the best essence of oak for winemakers around the world.

.....

Guidé par la passion de son métier et porté par cinq générations de savoir-faire, Jean-Charles Vicard et son équipe élaborent pour vous, avec les plus belles essences de chêne, des barriques, cuves et foudres de qualité.
